FAILLA®
BATTERY ● CENTER

Norme per un uso corretto nella preparazione e la carica delle batterie

1) BATTERIE SERIE YB E STANDARD CON CARICA A SECCO

a) Preparazione per il riempimento

Rimuovere i tappi di apertura solamente prima del riempimento della batteria con l'elettrolita e togliere il tappo di gomma dal relativo tubino di sfiato.

b) Riempimento dell'elettrolita

Riempire la batteria con l'elettrolita (acido solforico diluito) della densità di 1.280. Al momento del riempimento la temperatura non deve superare i trenta (30) gradi centigradi. Lasciare la batteria in posizione di riposo per almeno tre ore. Il livello dell'elettrolita durante questa fase dovrà calare, poi riempire di nuovo con acido fino al livello superiore.

c) Caricamento

Si raccomanda sempre di caricare la batteria prima dell'uso.

Caricare la batteria con corrente massima di carica pari a **un decimo** degli amper della batteria (esempio: una batteria da 10 Ah va caricata con un valore di 1 Ah) e tenere sotto carica la batteria per almeno 8/10 ore.

Se al termine della ricarica il livello dell'elettrolita è calato è necessario riempire di nuovo la batteria **con acqua distillata** fino al livello superiore. Al termine della ricarica richiudere i tappi, togliere gli eventuali residui di acido con acqua, quindi asciugare la batteria.

d) Servizio di mantenimento

- 1) Verificare il livello dell'elettrolita almeno una volta al mese
- 2) Aggiungere acqua distillata per ristabilire il livello in caso fosse calato
- 3) Non usare mai l'acido in caso di rabocchi
- 4) Controllare che i morsetti siano puliti ed applicare intorno ad essi del grasso per evitare corrosione.

IMPORTANTE

Nel caso che il veicolo non venga utilizzato per un tempo superiore a 30 giorni è necessario controllare il voltaggio della batteria che deve essere sempre superiore a 12V (ed eventualmente provvedere immediatamente alla sua ricarica). È importante ricordare che la batteria in stand-by ha un'autoscarica e quando il suo voltaggio scende sotto i 12V inizia un procedimento di solfatazione della piastra. Quando le piastre sono solfatate la batteria non genera più tensione quindi è necessario cambiarla.

2) BATTERIE SERIE YT (A BASSA MANUTENZIONE E CON ACIDO A CORREDO)

a) Preparazione per il riempimento

Togliere il nastro di chiusura e procedere come descritto nella pagina a fianco debitamente illustrata.

b) Caricamento della batteria

Procedere come descritto nel punto 1/C.

c) Questo tipo di batteria dopo che è stata caricata deve essere sigillata con l'apposita fascetta e da quel momento non necessita più aggiungere acqua distillata.

d) È estremamente importante controllare almeno una volta al mese che la tensione della batteria sia sempre superiore a 12V. Nel caso che il voltaggio non si superiore a 12V è necessario fare controllare l'apparato elettrico del veicolo in quanto il regolatore di tensione potrebbe non essere tarato con valori ottimali per mantenere la carica della batteria entro gli standard ottimali per una corretta ricarica. Anche in questo caso se il voltaggio della batteria è inferiore a 12V inizia il procedimento di solfatazione delle piastre.

3) BATTERIE SERIE YTZ O YT (SIGILLATE)

Questo tipo di batteria speciale non necessita di preparazione per il riempimento né di caricamento iniziale in quanto viene venduta già attivata.

Anche per questi tipi di batterie è necessario controllare periodicamente (entro due mesi dalla consegna) il valore della tensione e nel caso il voltaggio sia inferiore a 12V procedere alla sua ricarica come al punto 1/C.

TENERE LONTANO DALLA PORTATA DEI BAMBINI.

IMPORTANTISSIMO

Tutte le batterie di tecnologia "MF WET" (es.: YTZ10S, YT9B-4, YT14B-4, etc.) vengono da SGR consegnate già formate e cariche.

È necessario da parte Vostra **controllare** periodicamente che, durante lo **stoccaggio** la **tensione** non scenda mai sotto **11.80 Volt**. La frequenza dei controlli dipende dalle temperature e dalle condizioni ambientali dove vengono conservate le batterie.

Tensioni inferiori a **11.80 Volt** compromettono sia la durata di vita che il funzionamento della batteria innescando processi irreversibili di solfatazione che danneggiano la batteria stessa.

COME AGGIUNGERE L'ELETTROLITA

Avvertenze:

Accertarsi che la batteria sia fuori dal veicolo.

Controllare che l'elettrolita sia quello specifico per la vostra batteria.

1 Preparazione della batteria

Appoggiare la batteria su una superficie piana.
Togliere il nastro di chiusura.

Nastro di chiusura

Fuori di riempimento

2 Preparazione dell'elettrolita

Togliere il contenitore dell'elettrolita dalla busta di plastica. Staccare la fascetta di chiusura (utilizzata come i tappi della batteria citati più avanti) dal contenitore.

Fascetta di chiusura

Sel punti sigillati del contenitore

N.B.: non lasciare né forare i punti sigillati.

Agg

3 Procedura per riempire la batteria con l'acido

Rovesciare il contenitore dell'elettrolita ed appoggiarlo sulla batteria in modo che i sel punti sigillati siano allineati con i fori di riempimento della batteria. Fare pressione sul contenitore in modo che i punti sigillati si aprano. A quel punto si vedranno salire bolle d'aria da uno o più fori di riempimento, sia a destra che a sinistra.

N.B.: non inclinare il contenitore, in quanto il flusso dell'elettrolita si potrebbe interrompere.

4 Controllo del flusso dell'elettrolita

Assicuratevi che vi sia la risalita delle bolle d'aria, come indicato al punto 3. Lasciate il contenitore in questa posizione per almeno 20 minuti.

Bolle d'aria

N.B.: se non c'è risalita di bolle d'aria da nessuno dei sel fori di riempimento, picchiare due o tre volte sul fondo del contenitore. Non staccare mai il contenitore dalla batteria.

Non tagliare mai le giunzioni con pinze o simili.

5 Rimozione del contenitore

Accertatevi che tutto l'elettrolita sia uscito. Picchiate sul fondo del contenitore, come indicato al punto 4, se è rimasto del liquido. A questo punto staccare delicatamente il contenitore dalla batteria.

6 Sigillatura della batteria

Posizionare bene la fascetta di chiusura nei fori di riempimento. Accertatevi che la fascetta sia pari al livello superiore della batteria.

Fascetta di chiusura (tappi della batteria)

Premere in orizzontale con entrambe le mani

La procedura di riempimento è conclusa. Non togliere mai la fascetta di chiusura, né aggiungere acqua o elettrolita.

(英)

Batterie Moto

Batterie moto

Serie YUMICRON ad elevato spunto per avviamenti elettrici.

Serie MF a bassa autoscarica, a differenza delle serie normali non ha bisogno di successivi rabbocchi in quanto, una volta inserito l'acido, vengono sigillate a vita.

Batterie Moto

Batterie "Standard" e "Yumicron"
a 12 V per motocicli e scooter
